CanSORT – I Can Care Study page implementation plan

1-21-15 | Caitlin Geier (geierac@umich.edu)

Features

- 2 pages: one in English, one with the same text translated into Spanish
- Sidebar menu with links to both pages, available at all times
- Accordion menu for the FAQ section

Plan of Action

1. Create/modify pages
   a. Can use existing pages and modify the content as needed
   b. Reorganize page hierarchy and menu options so that Participation in Research page no longer shows up in the Research sidebar menu
      i. By necessity, this will change the URLs of both pages. The domain name for the study (icancarestudy.com) will need to be remapped to the new page URL for the English version page.
2. Implement accordion functionality
   a. This will most likely involve creating and installing a plugin. Plugin will include:
      i. JQuery code for accordion functionality
      ii. CSS to style the accordion to match the style of the site (as per mockup)
      iii. Shortcode(s) for adding accordions in the WordPress WYSIWYG editor
      iv. CSS to style the print version of the page (print version should ideally not have accordion; just plain text)
      v. Any necessary features to allow pages with accordions to meet accessibility guidelines
3. Test
   a. Can the pages be accessed from anywhere else on the site?
   b. Does icancarestudy.com point to the new location of the English language page?
   c. Does the code validate?
   d. Are the pages accessible?
   e. Are the print versions of the pages user friendly?
